MICROSEC.AI

UNIFIED & AUTOMATED MULTI-CLOUD PROTECTION

aws

Compliance Management → Compliance Fines

Data & Security Posture (DSPM) → Data Breaches

Workload Protection (CWPP) → App Downtime

Cloud Security Posture (CSPM) → Resource Hijacking

Why Microsec.ai?

- ⊘ Easy, agentless deployment
- ⊘ Auto-discovery of data, resources, and risks
- ⊘ Continuous monitoring of cloud and Kubernetes workloads
- ⊘ Runtime monitoring with automated remediations
- ⊘ Centralized policy enforcement

"It is a game changer for an IT team to have real-time protection across multiple public clouds, with context into network traffic and data in motion and at rest, driven by rules-based automation. This is a powerful combination of critical capabilities that has been missing from the market until Microsec.ai"

Sanjay Kalra, Founder of Lacework and ShiftRight (acquired by Zscaler)

About Microsec.ai

Founded in 2021 by a team of cloud security experts from Symantec, Blue Coat, and Elastica with a vision to make cloud-native security simple and effective. Microsec.ai is proudly the first agentless Cloud-Native Protection Platform (CNAPP) with AI-based Data Loss Prevention (DLP) and runtime micro-segmentation.

Prevent data breaches, app downtime, and compliance violations across multi-cloud environments

Save time, money, and reduce operational complexity with one solution

A five-minute deployment provides runtime protection for your cloud and Kubernetes environments. With one-click, you get the industry's most extensive data security, posture management, and compliance reports with automated remediation. Save hundreds of work hours, reduce overall cloud risk, and prevent breaches before they harm your business.

Let Microsec.ai find it, fix it, and document it for you

Data Security Posture Management (DSPM)

Understand the "who, what and where" of your data. Auto classify sensitive information to prevent/remediate potential breaches.

Cloud Security Posture Management (CSPM)

Harden your cloud by automatically detecting misconfigurations, public access and open ports.

Cloud Workload Protection Platform (CWPP)

Detect and remediate vulnerabilities and malware incursions to reduce app downtime.

Compliance

Automatically monitor and document compliance status for CIS, SOC2, NIST, ISO, HIPAA, HITRUST, PCI, CMMC, FEDRAMP, and more.

Micro Segmentation and Kubernetes

Monitor and control runtime network traffic inside your cloud apps. Apply micro segmentation policies with one-click.

Agentless with Auto Remediation

Microsec deploys in 5-minutes and offers quick time to value. Set and manage policies to enforce your ideal security posture.
